===>>> Our sincere thanks to Mr. Gabriel L. G. from NV , for his generous gift to help us cover our costs.

This chart courtesy MacLeod Finance shows the rapid decrease in the value of the US dollar priced in gold.

This chart courtesy US FED shows the unsolvable problem facing the USA along with other nations. Since they cannot stop spending because the house of cards would implode, they just increase spending! The result is monetary destruction and price inflation.

Featured is the short-term gold trend that runs on average 17 days and it is the chart that helps my supporters and I plan the short term. The green arrows point to bottoms and the blue arrows point to tops. Today was day #8 in the current cycle.

Featured is the daily gold chart. The green arrows point to the rising 50DMA. Since Oct/23 price has held above this important moving average. The current target is at the blue arrow.

Featured is the weekly gold chart. The green arrows point to bottoms in the 7-8 week gold cycle, the brown arrows point to tops. The current cycle is #2 with a target at the blue arrow.

Featured is GDX the miners ETF. Price is rising inside the blue channel. The SIs are positive and the MAs are in positive alignment. A close above the blue arrow sets up a target at the green arrow.

### == >>> MODEL PORTFOLIO

Each report will show the trades that were completed since the last report.

Since I do most of my trading on the TSX, I will show the stock symbol for the US equivalent in brackets. Note: when trading a pink sheet listed stock, you should always buy or sell using a specific price - never a 'market' order.

To benefit from this feature, pull up a chart for any of the symbols that I buy or sell. Determine if you want to do likewise or wait for another opportunity. If you're not sure of the fundamentals, - click on the website link provided. Always make sure the index or ETF that represents the sector is in harmony with your trade. I apologize for the short time I stay in some stocks, but this is all based on chart patterns. If the chart pattern changes from positive to negative - I usually run. Here are some of my trading habits:

- **I eliminate all emotion.** Stocks are simply investments that I use to improve the bottom line. I pick a stock or commodity because I think the chart pattern looks positive. Once I decide that we are operating in a bull market, I don't bother with sell stops - I patiently wait for the stock or ETF to come back into positive territory.
- **When I do sell below my cost, I look at the loss as an opportunity to get into a winner.**
- I use the 20 day and 30 day exponential moving averages at Stockcharts.com to help me decide when to buy and when to sell. Then I draw a channel, just as I do in the reports I issue. As long as the stock stays in the channel, I'll keep it as part of the portfolio, unless I decide to take profits.
- You've heard people say: 'Buy Low – Sell High'. Here is a variation on that advice: **BUY HIGH – SELL HIGHER!** It has been my experience that buying stocks that have just broken out to a new 5 year high have been the best performers in my portfolio. When a stock or commodity has reached this stage, there is 'blue sky' ahead.
- Next I look at the supporting indicators – especially the Accumulation/ Distribution line. When a stock or commodity becomes overbought (such as trading near the top of the channel, or making a 'double or triple' top), I usually sell all or part of my holding into the rally. . Over time I try to replace these stocks during pullbacks.
- Finally I make sure that the sector in which the stock or commodity operates, is moving in the same direction as the stock of commodity that I am about to buy.

Here are some kernels of wisdom from a very successful trader, Jesse Stine:

- Emotional intelligence is of utmost importance.
- Discipline is key
- Drawdowns are lessons.
- Patience is very important
- Ignore the news media
- Have faith in your system
- Trade with confidence
- Never get attached to a stock
- Be a contrarian
- Be a lone wolf.

According to an article titled: The Strange Behavior of Gold Investors, by Dimitri Speck (link is here): <https://www.gold-eagle.com/article/strange-behavior-gold-investors-monday-thursday>

Monday is a day when investors usually sell gold early.

Transactions within the Model Portfolio are shown as they occur, in the daily report that goes out to supporters.

I often take profits via a transaction that was planned when I bought the stock. So far during the past 12 months we closed out 220 positions. 217 at a profit and 3 at a loss. This produced a ratio of +97% These numbers will change slightly whenever we switch to the latest 12 month period

The reason why our portfolio is large is because of a desire to be of help to as many investors as possible, by blazing a trail, and 'trading with our supporters'. Our position in 'penny stocks' is always very conservative, but growing if the price rises. The % increase in a penny stock with proven assets in a safe location usually beats a senior producer 'hands down'.

26 positions are 'under water'. (SL) means I'm planning to sell this stock into the next rally).

**The Model Portfolio consists of 83% precious metals, 11% in various other categories and 6% cash.**

Source: David Jacks, Bloomberg, Schiller, G&R.

This chart courtesy sources listed shows commodities are still very much undervalued, compared to the S&P 500 Index.

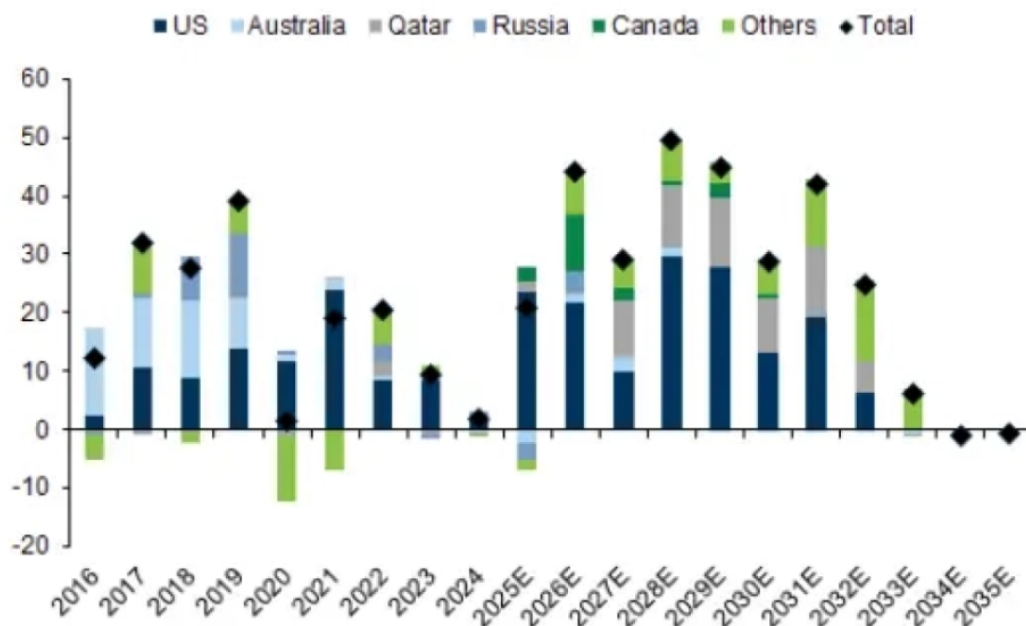

Featured is the silver chart. Price is carving out a large triangle. The SIs are mixed but the MAs are in positive alignment. A rise above the blue arrow sets up a target at the green arrow.

Featured is SIL the silver producers ETF. Price is rising inside the blue channel. A close above the blue arrow will mark the start of a rally, with a target at the green arrow. The SIs are positive along with the MAs.

=== >>> Food for Thought is next.

The true light that gives light to every man was coming into the world.”

— John 1:9, NIV

Have you ever been afraid of the dark? Perhaps as a child you feared that monsters lurked in your bedroom, just waiting for the lights to go out. Or maybe as an adult you fear that people with evil intentions hide in the shadows, ready to attack.

Dangers do lurk in darkness. I refer not to “things that go bump in the night,” but to very real dangers which exist in the dark. After all, darkness is the domain of the “Prince of Darkness,” who hates the Light and does all he can to keep people from coming to the Light.

Many of the most dramatic, compelling, and illuminating stories found in the Bible took place at night. It was night when the Sodomites beat upon Lot's doors and demanded his two angelic visitors to molest. It was night when David looked upon the form of Bathsheba bathing upon the rooftop below, then called her to his

presence and committed the sin of adultery.

But the darkest "night" this world has ever seen took place at midday on Calvary. In that darkness, the noon that became midnight, humankind's sin extinguished the Light of the World. Christ endured in body and soul the penalty, pain, and anguish which we so rightly deserve for our sinfulness.

But darkness couldn't extinguish the Light forever. Isaiah foretold the day when the "people who walked in darkness [would see] a great light." That great Light is Jesus Christ, whom the Bible calls the Light of the World. He promises to give us the light of everlasting day if we will yield our hearts to Him. Jesus Christ is the sun of our souls, and when He comes into the darkness of our hearts, He brings a Light which forever lightens our lives and gives us purpose. And when our time comes, Christ will take us to our everlasting home, and in that great day, we will discover there is no night there.

Because of Christ's sacrifice, you need not fear the darkness. Today rejoice in Christ's everlasting Light, the Light that extinguishes darkness this day and for eternity.

"When He came, there was no light.  
When He left, there was no darkness."
